

Box and R integration using API TO Downloading Epi Info Mobile Data from Box

Configuring existing Box account to access API

- Log in to your Box account
- Click on  from the bottom of the Left Navigation Menu

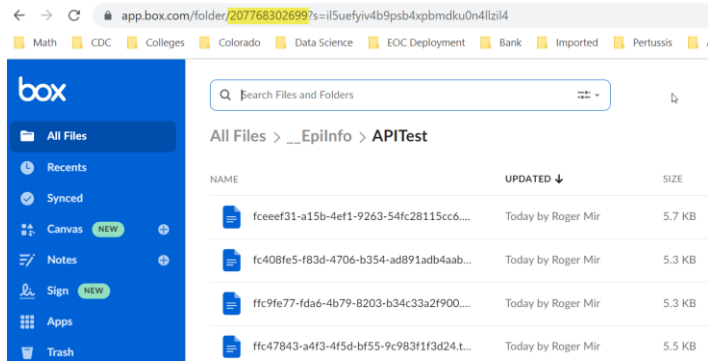

- Click on **Create New App**
- Select **Custom App**
- Enter the App name in the App Name field

(Note: app name could be any name of your choice. This name does not have to be the same as your Project or Form name)

- Enter description (optional) in the description field
- Select **Automation** from the Purpose dropdown menu
- Click on **Next**
- Select **User Authentication (OAuth 2.0)** from the STEP 2 OF 2 menu
- Click on **Create App** button
- Click on the **Configuration** option from the top menu
- Enter <http://localhost:1410/> in the **Redirect URLs** text box

Get a folder or sub-folder code from the Box account

- Log in to your Box account
- Navigate to your data project folder or sub folder in the Box
- From the browser address, copy the numeric portion of the address; see the screenshot below, 207768302699
- The numeric number represents your current folder or subfolder

Get the Client ID and Client Secret

- Click on the **</> Dev Console** from the bottom of the left menu
- Click on your application
- Click on the **Configuration** Tab from the top menu
- Scroll down to **OAuth 2.0 Credentials** option
- Copy the **Client ID** and **Client Secret** into your R codes
